

Landing Page Pre-Flight Audit

Do not put ad spend behind this page yet.

Verdict	HOLD — do not spend yet
Readiness	0 / 100
Page	https://neemans.com/products/curve-knit-slip-ons-for-men-ivory
Run at	2026-09-16T08:05:02.647Z
Took	92.0s
Findings	7 serious · 5 middling · 1 minor
Interpretation	AI analysis by gemini-3.6-flash

01 · What this means for your budget

Your advertising tracking is severely broken and will waste your budget. Google Ads is recording multiple fake sales before a customer even clicks anything on the page. Meanwhile, major ad channels like Meta, Snap, and Criteo receive no data when someone adds a product to their cart.

02 · Two kinds of finding

Every finding in this report is stamped with where it came from.

- **MEASURED** — a fixed rule applied to what the browser actually observed. Same telemetry in, same finding out, every time. No model involved.
- **AI** — a language model reading facts the measured layer already established, and judging what they mean commercially. It never decides what fired.

03 · The checklist

	Check	Result	Detail
PASS	The page actually loads	pass	Responded HTTP 200 and stayed on neemans.com.
PASS	Your tags are installed and firing	pass	Both required tags fired. Google Analytics 4: 13 requests; Meta Pixel: 8 requests.
FAIL	Nothing fires twice	fail	7 event(s) fired more than once.
PASS	The data actually arrives	pass	All 130 tracking requests were accepted.
FAIL	One account per platform	fail	3 platform(s) split across multiple accounts.
FAIL	Add to cart gets tracked	fail	Meta Pixel, Snap Pixel, Criteo received no conversion event after the click.
FAIL	Event names make sense to the platforms	fail	6 of 10 named events are non-standard.
PASS	Nothing dead is still running	pass	No traffic to deprecated Universal Analytics endpoints.

► How each check is decided

04 · What to do next

1. Pause paid ad spend directed to this page until tag triggers are fixed.
2. Remove automated conversion triggers that fire during initial page load.
3. Configure Meta, Snap, and Criteo pixels to capture add-to-cart events.
4. Deduplicate Google Ads tags to fire only once per user click.
5. Remove duplicate GA4 and Snap account IDs from Tag Manager.

05 · Findings

[MEASURED] Google Ads sent "conversion" 2 times (first at 13.1s, during load)

serious

This is a conversion event. Counting it 2 times inflates reported sales and teaches the ad platform to bid on the wrong signal.

- `event` : Google Ads / conversion
- `fired at (ms)` : 13059, 13733
- `phases` : load

How this was determined: a fixed rule over observed network traffic.

[MEASURED] Google Ads sent "conversion" 2 times (first at 17.3s, during load)

serious

This is a conversion event. Counting it 2 times inflates reported sales and teaches the ad platform to bid on the wrong signal.

- `event` : Google Ads / conversion
- `fired at (ms)` : 17300, 17432
- `phases` : load

How this was determined: a fixed rule over observed network traffic.

[MEASURED] Google Ads sent "add_to_cart" 2 times (first at 56.7s, during add_to_cart)

serious

This is a conversion event. Counting it 2 times inflates reported sales and teaches the ad platform to bid on the wrong signal.

- `event` : Google Ads / add_to_cart
- `fired at (ms)` : 56656, 57278
- `phases` : add_to_cart

How this was determined: a fixed rule over observed network traffic.

[MEASURED] Google Ads sent "conversion" 2 times (first at 56.7s, during add_to_cart)

serious

This is a conversion event. Counting it 2 times inflates reported sales and teaches the ad platform to bid on the wrong signal.

- `event` : Google Ads / conversion

- `fired at (ms) : 56674, 57280`
- `phases : add_to_cart`

How this was determined: a fixed rule over observed network traffic.

[MEASURED] The add-to-cart click produced no conversion event for Meta Pixel

serious

The button was clicked (`form[action*="/cart/add"] button[type="submit"]`) (normal click) + variant chooser) and Meta Pixel was live on the page, but no commercial-intent event reached it in the 46 requests that followed. This platform cannot optimise towards or retarget people who add to cart.

- `click strategy : form[action*="/cart/add"] button[type="submit"]` (normal click) + variant chooser
- `Meta Pixel events after the click : none`

How this was determined: a fixed rule over observed network traffic.

[MEASURED] The add-to-cart click produced no conversion event for Snap Pixel

serious

The button was clicked (`form[action*="/cart/add"] button[type="submit"]`) (normal click) + variant chooser) and Snap Pixel was live on the page, but no commercial-intent event reached it in the 46 requests that followed. This platform cannot optimise towards or retarget people who add to cart.

- `click strategy : form[action*="/cart/add"] button[type="submit"]` (normal click) + variant chooser
- `Snap Pixel events after the click : none`

How this was determined: a fixed rule over observed network traffic.

[MEASURED] The add-to-cart click produced no conversion event for Criteo

serious

The button was clicked (`form[action*="/cart/add"] button[type="submit"]`) (normal click) + variant chooser) and Criteo was live on the page, but no commercial-intent event reached it in the 46 requests that followed. This platform cannot optimise towards or retarget people who add to cart.

- `click strategy : form[action*="/cart/add"] button[type="submit"]` (normal click) + variant chooser
- `Criteo events after the click : none`

How this was determined: a fixed rule over observed network traffic.

[AI] Google Ads counts non-existent sales as soon as the page opens

serious · affects Google Ads reported ROAS and cost per acquisition

Automated ad bidding algorithms will see high conversion numbers that never happened, driving spend toward useless traffic that just opens the link.

Evidence. Google Ads received 8 separate conversion events between 11.7 seconds and 17.4 seconds during initial page load, long before any user click occurred.

Fix. Remove conversion tags assigned to page-load triggers and restrict conversion firing strictly to confirmed purchases.

How this was determined: a model judged severity and business impact from measured telemetry. It did not decide what fired.

[AI] Meta, Snap, and Criteo are completely blind to shopper intent

serious · affects Meta, Snap, and Criteo retargeting ROAS

You cannot retarget high-intent shoppers on Meta, Snap, or Criteo because these platforms never know when a user adds a product to their cart.

Evidence. When the add to cart button was clicked at 56.3 seconds, zero events were sent to Meta Pixel, Snap Pixel, or Criteo.

Fix. Add standard add_to_cart triggers in Tag Manager for Meta, Snap, and Criteo.

How this was determined: a model judged severity and business impact from measured telemetry. It did not decide what fired.

[AI] A single cart add triggers multiple conversion claims in Google Ads

serious · affects Google Ads add-to-cart conversion count

Your reporting will vastly overstate product demand and cart actions, making campaign reporting unreliable.

Evidence. A single add-to-cart action at 56.3 seconds generated 6 separate conversion calls to Google Ads across multiple account IDs.

Fix. Deduplicate Google Ads triggers so one button click sends exactly one event.

How this was determined: a model judged severity and business impact from measured telemetry. It did not decide what fired.

[MEASURED] Google Ads sent "page_view" 2 times (first at 13.1s, during load)

middling

The identical beacon was sent 2 times, so this event is over-counted by roughly 50%.

- `event` : Google Ads / page_view
- `fired at (ms)` : 13093, 13737
- `phases` : load

How this was determined: a fixed rule over observed network traffic.

[MEASURED] Google Ads sent "view_item" 2 times (first at 13.1s, during load)

middling

The identical beacon was sent 2 times, so this event is over-counted by roughly 50%.

- `event` : Google Ads / view_item
- `fired at (ms)` : 13114, 13756
- `phases` : load

How this was determined: a fixed rule over observed network traffic.

[MEASURED] Google Analytics 4 is reporting into 2 separate accounts

middling

Traffic is being split across G-3042L5GP9T, G-VDE0ZFZ4LP. No single account sees the whole picture, so every report built on one of them undercounts.

- `account 1` : G-3042L5GP9T
- `account 2` : G-VDE0ZFZ4LP

How this was determined: a fixed rule over observed network traffic.

[MEASURED] Google Ads is reporting into 2 separate accounts

middling

Traffic is being split across G-3042L5GP9T, 766814719. No single account sees the whole picture, so every report built on one of them undercounts.

- `account 1` : G-3042L5GP9T
- `account 2` : 766814719

How this was determined: a fixed rule over observed network traffic.

[MEASURED] Snap Pixel is reporting into 2 separate accounts

middling

Traffic is being split across f4be72d7-8814-42ea-acc9-1775197150e9, 725649e1-0ad2-4529-9339-91a6bca3a646. No single account sees the whole picture, so every report built on one of them undercounts.

- `account 1` : f4be72d7-8814-42ea-acc9-1775197150e9
- `account 2` : 725649e1-0ad2-4529-9339-91a6bca3a646

How this was determined: a fixed rule over observed network traffic.

[AI] Data is split across duplicate Google and Snap account IDs

middling · affects GA4 total session and event counts

Your analytics reporting is fractured across two separate Google Analytics accounts and two Snap account IDs, leading to inaccurate performance summaries.

Evidence. GA4 tracking sends events to both G-3042L5GP9T and G-VDE0ZFZ4LP, while Snap sends to two distinct account IDs.

Fix. Audit Google Tag Manager and remove secondary or legacy tracking IDs.

How this was determined: a model judged severity and business impact from measured telemetry. It did not decide what fired.

[MEASURED] 6 event name(s) are not recognised by the platforms

minor

Names like "checkout_gokwik", "scroll_depth", "loyalty_touchpoint_view" are custom. They still record, but they cannot drive the platforms' built-in conversion optimisation or standard reporting.

- `Google Analytics 4` : checkout_gokwik (1x)
- `Google Analytics 4` : scroll_depth (1x)
- `Google Analytics 4` : loyalty_touchpoint_view (1x)
- `Google Analytics 4` : Neemans_Opti_Tracking (1x)
- `Google Analytics 4` : form_start (1x)
- `Google Analytics 4` : ADD-TO-CART-GA4-V2 (1x)

How this was determined: a fixed rule over observed network traffic.

07 · What the event names mean

Event	Vendor	Category	In plain English	Should be called
checkout_gokwik	ga4	custom_ambiguous	Records an automated initialization of the GoKwik checkout widget during page load.	begin_checkout
scroll_depth	ga4	custom_clear	Tracks how deep a user scrolled on the page.	scroll
loyalty_touchpoint_view	ga4	custom_clear	Records when a customer views a loyalty rewards element.	loyalty_touchpoint_view
Neemans_Opti_Tracking	ga4	custom_ambiguous	Internal tracking for website optimization and experiment testing.	optimization_experiment_view
ADD-T0-CART-GA4-V2	ga4	custom_clear	A secondary custom event triggered on adding an item to the cart.	add_to_cart

08 · Things that fired more than once

Vendor	Event	Times	Conversion?	Phases
Google Ads	conversion	2	yes	load
Google Ads	page_view	2	no	load
Google Ads	view_item	2	no	load
Google Ads	conversion	2	yes	load
Google Ads	add_to_cart	2	yes	add_to_cart
Google Ads	conversion	2	yes	add_to_cart
Google Ads	conversion	2	yes	add_to_cart
